# BUILD IT SECURE. LEAD IT FORWARD.

Application security built by someone who has run the programs you are being asked to build. **From your CI/CD pipeline to your executive strategy.** Training, automation, and advisory from 25+ years in the trenches at Amazon, AWS, Disney, and SAP.

**The Playbook**  
The Product Security Playbook

"Most security programs fail in process and politics, not in the code. **My mission is to build the systems, and grow the leaders, that close that gap.**"

CHAD BUTLER · FOUNDER, MISSION INFOSEC

Thank you for taking the time to learn who we are and how we work. This guide exists for one reason: to help you find the right next step for your security program, whether that's training a team, automating a pipeline, or guiding a leader.

Mission InfoSec is built on a simple idea. **The strategy that secures a Fortune 50 product is the same strategy that secures yours.** It just needs to be made practical, automated, and teachable. That's the mission.

We split everything we do into two tracks. **BUILD** is the hands-on work: training, pipeline automation, and consulting for the teams writing and shipping code. **LEAD** is the strategic work: advisory, coaching, and fractional leadership for the people accountable for product security.

If you're not sure where you fit, reach out. We'll point you to what brings the most value, even when that's not us.

TRACK 01

# BUILD IT SECURE

The hands-on work. Training, pipeline automation, and consulting for the engineers and security teams writing, shipping, and defending code.

---

FOR: ENGINEERING LEADERS · SECURITY ENGINEERS · PLATFORM TEAMS · FOUNDERS CHASING FEDRAMP

# CI/CD SECURITY AUTOMATION BUILDS

Go from manual security fire drills to **audit-ready pipelines that run while you sleep**. We even have a dedicated offering for teams that need the machine-readable evidence FedRAMP 20x demands.

## THE PROBLEM WE REMOVE

- › Security lives in spreadsheets and last-minute audit scrambles instead of in the pipeline.
- › AI coding tools ship vulnerable code **faster than your team can review it**.
- › FedRAMP 20x requires continuous, machine-readable evidence your current process can't produce.

## WHAT WE BUILD

- › **SAST, DAST, SCA & secret scanning** wired into CI/CD, on every commit and every build.
- › **Policy-as-code gates** that stop risky changes without slowing delivery.
- › **Automated SBOM generation** for continuous software supply-chain visibility.
- › **Continuous, machine-readable VDR** mapped to FedRAMP 20x evidence requirements.
- › **Dashboards** that show risk and progress to engineers and auditors alike.

## THE END STATE

- › A pipeline that **proves its own compliance** continuously, not once a year.
- › Vulnerabilities caught at commit time, not in a pen-test report months later.
- › Faster authorization, cleaner audits, fewer human bottlenecks.
- › A reference implementation your team can **own and extend** after we leave.

## BUILT ON PROVEN GROUND

- › The same automation-first strategy deployed at **SAP/Concur, Amazon, and Disney**.
- › GitHub Actions & AWS-native. Extensible to your stack.

## RISK REVERSAL · PAID PILOT

Start with a fixed-fee pilot: **one pipeline or one FedRAMP 20x evidence artifact, built and demonstrated**. If it doesn't work as specified, you don't proceed, and we part ways clean. De-risk the big build before you commit to it.

# DEVSECOPS CONSULTING

One program, three depths. **We guide you, we build it with you, or we run it as your team.** You set the depth.

## CHOOSE YOUR ENGAGEMENT DEPTH

### 01 Advise & Guide

We assess your SDLC, design the target-state program, and hand your team a clear roadmap. You build it; we steer.

### 02 Advise · Build · Verify

We build the reference implementation alongside your team: the working pipeline, the policies, and the proof. Then we verify it holds.

### 03 Embedded Fractional AppSec Lead

We step in as your application-security leadership, owning the program, the tooling, and the team enablement until it runs itself.

## WHERE IT FITS

- › Greenfield AppSec programs with nothing operational yet.
- › Teams with tools but no working pipeline or strategy tying them together.
- › Orgs that need senior leadership **without a full-time hire.**

## WHAT YOU WALK AWAY WITH

- › Outcome-defined milestones, not a task list.
- › A program your team can sustain after the engagement.
- › Measurable reduction in time-to-remediate and audit friction.

## STANDING GUARANTEE · SCOPED OUTCOME

Every milestone has **acceptance criteria defined up front.** You approve the work against that spec before we invoice it. If a milestone doesn't meet what we agreed, we fix it before you pay.

# AI SECURE DEVELOPMENT

Ship AI-generated code without shipping AI-generated risk. **DevSecOps discipline, applied to AI-native workflows.**

## THE PROBLEM WE REMOVE

- › AI assistants generate code **faster than human review can keep up.**
- › Prompt-driven development introduces risks traditional gates don't check.
- › Teams adopt AI tooling with no security guardrails around it.

## WHAT WE DELIVER

- › Secure-by-default patterns for AI-assisted development.
- › Automated review & scanning tuned for AI-generated output.
- › Guardrails and policy that let teams move fast **safely.**

# OFFENSIVE TESTING + REMEDIATION LOOP

A test report is where most engagements stop. **We turn findings into action inside your pipeline.**

## HOW IT WORKS

- › We coordinate **vetted, experienced penetration testers** matched to your environment.
- › Findings get pushed straight into your **remediation pipeline**, not buried in a PDF.
- › We help your team **generate fixes and guardrails** that prevent the same class of issue from coming back.

## WHY IT'S DIFFERENT

- › One accountable partner from finding to follow-through, with no report that dies in an inbox.
- › A proven model: employed at AWS and Disney's high-scale penetration testing programs.

# DEVSECOPS PRO & TEAM TRAINING

Turn builders into people who ship secure pipelines, **using the exact strategy proven at Amazon, Disney, and SAP.**

## DEVSECOPS PRO · THE COURSE

- › **For:** developers, security engineers, and technical founders with AppSec responsibility.
- › Build a portfolio of **working pipelines in your own GitHub account**, not contrived labs.
- › 32 lessons · 15 hands-on labs · 15 copy-ready templates.
- › SAST, DAST, SCA, SBOM, policy-as-code, and securing AI-generated code.
- › Live bi-weekly coaching calls + private practitioner community.

**\$397** / year · per seat

14-DAY TRIAL · 30-DAY MONEY-BACK GUARANTEE

## PRIVATE TEAM TRAINING

- › The full DevSecOps Pro curriculum, **licensed for your whole team.**
- › Get developers building secure pipelines together, at the same pace.
- › **Satisfies annual secure-coding training** compliance requirements in one move.
- › Private cohort scheduling and team progress visibility.
- › **Team pricing is scoped to your size and goals**, so let's talk.

## THE OUTCOME

- › Teams that **prevent the findings** a pen test would otherwise keep surfacing.
- › Job-ready, portfolio-backed skills, applied the day they're learned.

RISK REVERSAL · 30-DAY MONEY BACK

Try the full annual course for 30 days. If it isn't worth it, email us and **we refund you. No forms, no questions.**

TRACK 02

# LEAD IT FORWARD

The strategic work. Advisory, coaching, and fractional leadership for the people accountable for product security, from a guide with real time in the seat.

---

FOR: CISOS · SECURITY LEADERS WITH PRODUCT RESPONSIBILITY · FOUNDERS · NEW LEADERS

# LEADERSHIP ADVISORY & EXECUTIVE COACHING

Counsel from real time in the seat, not the sidelines. **Senior security leadership at Amazon, AWS, Disney, SAP, and Affirm**, with the scars and judgment that come from doing the job.

## WHO IT'S FOR

- › CISOs and security leaders carrying **product-security responsibility**.
- › Newly promoted leaders who need a confidential guide, fast.
- › Founders making security decisions above their experience line.

## WHAT YOU GET

- › Direct counsel from lived experience, with **no consulting-deck theater**.
- › Someone who understands the **politics and nuance** of leading these efforts, not just the framework.
- › A confidential partner for the decisions you can't workshop internally.

# VIRTUAL CISO & FRACTIONAL LEADERSHIP

A virtual CISO (vCISO) gives you senior security leadership **at the fraction of the time and cost a full-time hire demands**.

## THE ENGAGEMENT

- › Ongoing, fractional ownership of your security strategy and posture.
- › Board-ready reporting, roadmap, and program governance.
- › A leader accountable for your security program, on a fraction of a hire.

## WHEN TO CHOOSE IT

- › You need a security leader but **not yet a full-time salary**.
- › You're between leaders and can't let the program drift.
- › Investors or customers expect mature security governance now.

## STANDING GUARANTEE · SCOPED OUTCOME

Engagements are defined by **outcomes and acceptance criteria agreed up front**. You see the value before you're invoiced for it.

# WHY MISSION INFOSEC

EARNING YOUR TRUST

BUILT IN THE MOST DEMANDING SECURITY ENVIRONMENTS IN TECH

### IN THEIR WORDS

★★★★★

"Incredibly valuable content. Super excited for the course, it is great material."

AWS PRINCIPAL SECURITY ENGINEER · DEVSECOPS PRO

★★★★★

"Practical, accurate, and applicable advice for anyone hoping to lock down their InfoSec career."

MARK R · VERIFIED STUDENT

★★★★★

"Mission InfoSec is absolutely amazing. Chad is kind and helpful, the courses are insightful, and his 1-on-1 sessions have helped my career so much. Highly recommend if you like step-by-step, hands-on teaching."

BLAKE B. · TRUSTPILOT · JAN 2026

# HOW WE WORK

FIVE STEPS, NO PRESSURE

01

## Reach Out

Email or book a call. Tell us what's keeping you up at night, and what you're trying to build toward: a pipeline you trust, a team that ships securely, an authorization you need to win, or a program you're proud to lead.

02

## A Real Conversation

A 30-minute call. No pitch, just figuring out whether your problem is a training, automation, consulting, or leadership problem.

03

## Find the Right Fit

Together we pick the offer that brings the most value: Build track, Lead track, or a combination. And if we are not the right fit for what you need, we will tell you, and point you toward who is.

04

## Scope the Outcome

We define deliverables and acceptance criteria up front. For pipeline builds, we'll often start with a fixed-fee pilot so you can de-risk before committing.

05

## Build, Lead, Deliver

We do the work against the spec. You approve milestones before you're invoiced. You keep what we build.

”

**If we are not the right fit for what you need, we will say so. We would rather send you to the right solution than sell you the wrong one. That is how we earn the next conversation.**

**Already worked with us?** Skip the early steps and reach out. We'll pick up right where we left off.

# LET'S BUILD IT SECURE **TOGETHER.**

Tell us where you are: a pipeline, an audit, a team, or a decision.  
We'll point you to the right next step, even when it isn't us.
